Assignment 1

1 Design

Describe the design of your system by providing the following information:

- Module design: structure block - flow chart and description, if any

- Class design: UML class diagram and description, if any

2 Running Result

Provide an illustration of your running system by providing screenshots of all the different steps and dialogues and any other relevant information you consider important.

- Screenshot (at least 3)

- Explanation of each screenshot

3 Problems

Describe major design decisions you had to make and the problems you encountered when implementing the system together with the solutions you devised.

- Problems and solutions
